touch

“OUR INMU GIVES US  
MOMENTS OF PEACE”

Being family members and caregivers of a person suffering from dementia can be a daily challenge. Sensory stimulation is a key for improving the wellbeing of people with dementia. The **inmu** helps to feel safe and relaxed. Thus, it enhances the quality of life for both the person suffering from dementia and their family and caregivers.

To use an **inmu** is simple and intuitive. There are no buttons, just touch it and it starts.

## “MY WIFE CAN HEAR AND FEEL THE MUSIC. IT HELPS HER TO FIND RELAXATION AND IMPROVES HER SLEEP”

With its soothing sounds and soft vibrations the **inmu** decreases distress and restlessness. It helps to relax and promotes a good night's sleep.

After falling asleep, it turns off automatically. If the **inmu** is activated, for instance by waking up, it helps people to go back to sleep quicker.

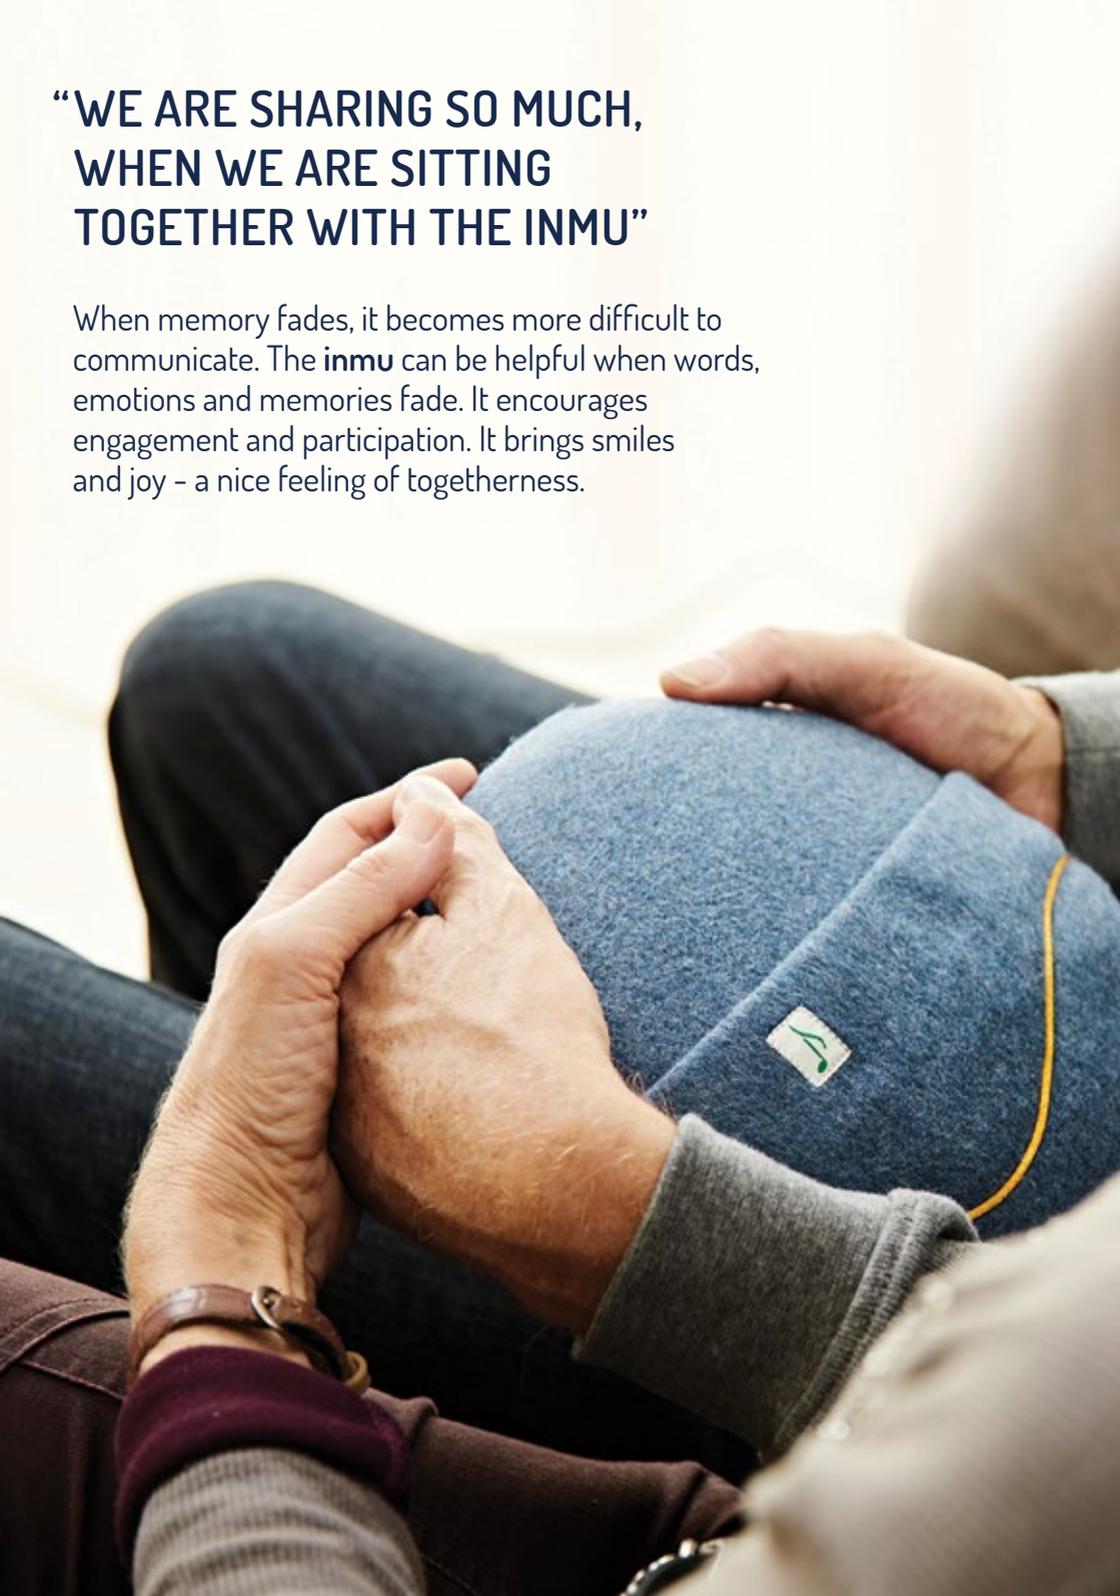

## “WHEN MY FATHER HOLDS THE INMU, HE SMILES AND HUMS ALONG”

Being touched by a beautiful melody does not change after a dementia diagnosis. In fact, studies have shown that music can effectively stimulate motor functions and language skills. Through touch and movement, the **inmu** unfolds a unique interactive soundscape. It invites to follow along and soft vibrations and tactile materials enrich the stimulation and the feeling of the body for the user.

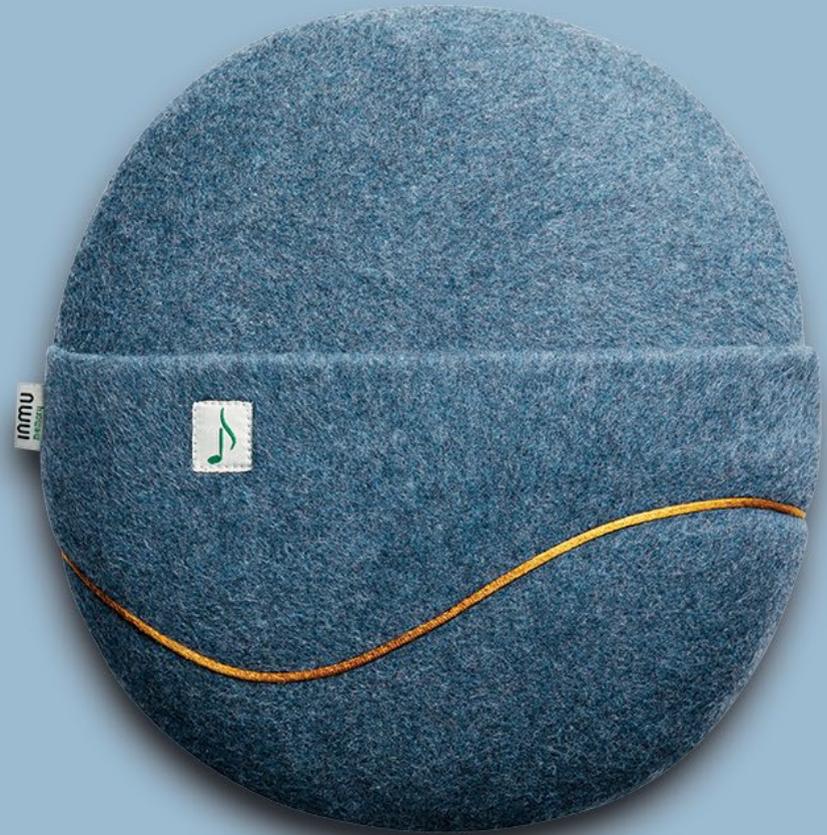

## “WE ARE SHARING SO MUCH, WHEN WE ARE SITTING TOGETHER WITH THE INMU”

When memory fades, it becomes more difficult to communicate. The **inmu** can be helpful when words, emotions and memories fade. It encourages engagement and participation. It brings smiles and joy - a nice feeling of togetherness.

## Modern technology embraced by timeless design

The **inmu** has a comfortable round shape, covered by high-quality hypoallergenic organic cotton, which cleverly hides the advanced technology inside. A pocket makes it easy to hold the **inmu**. Small details, like a golden line, promote tactility and body sensation.

## “FOR US IT IS ALL ABOUT DIGNITY AND JOY”

Anders Hansen and Toni Marquard - inventors of **inmu**

“WITH THE INMU, WE WANTED TO CREATE A HIGH QUALITY PRODUCT, THAT IN A DIGNIFIED AND SIMPLE WAY, HELPS GIVING PEOPLE A FEELING OF CALM AS WELL AS MAKING IT EASIER FOR THE CAREGIVER”

The inmu was created by the couple Anders Hansen and Toni Marquard after their closest family member were diagnosed with dementia.

Together with the textile designer Emilie Wiehe, the composer Asger Steenholdt and in collaboration with nursing homes, a product with tangible music was developed. inmu stands for “interactive music” and as the name implies, it reacts to movements and touch, while taking the user on a unique musical journey.

The inmu can be ordered from our website or by mail/phone.
